March 28, 2008

Dear Designer/Installer:

On March 28, 2008, the New Hampshire Department of Environmental Services issued the Enviro-Septic[®] wastewater treatment system an innovative/alternative technology approval #2008-03-01 (ITA). In accordance with condition IIIe of the approval we recommend the following language be included on all future Enviro-Septic[®] system plans submitted to NHDES:

Enviro-Septic[®] wastewater treatment systems are approved by NHDES as ITA #2008-03-01 in accordance with Part Env-Ws 1024. The system is designed in accordance with the New Hampshire Enviro-Septic[®] Manual.

This is a general approval with reference to the manual cited above. In item IIIa of the State approval the vertical separation distances to the seasonal high water table or bedrock or other impermeable surface is clearly listed as 30 inches (2.5 feet). These distances are measured from the bottom of the Enviro-Septic[®] pipe.

While this ITA supercedes all other NHDES approvals, no other changes in current system design practices are required.

Enviro-Septic[®] design plans already approved with a 36" separation distance may be amended by the designer to reflect a 30" separation distance without submitting a new application to NHDES (if system size and location are not changed).

Sincerely yours,

David W. Presby
