

\\Users\ksteelman\OneDrive - Advanced Drainage Systems\Desktop\EZflow Drawings\EZflow 1001P - GEO CROSS SECTION.dwg

A cross-sectional diagram of a trench installation. At the top, green grass represents the ground surface. Below the surface, a layer of native backfill is shown. A 4-inch perforated pipe is installed in the trench, surrounded by a 10-inch EZflow bundle (a blue circular area with a hexagonal pattern). A filter fabric (red hatched area) is placed between the pipe and the backfill. The trench width is indicated as 10 inches minimum. The diagram also shows the requirement for 6 inches minimum cover or by code, and the instruction to establish vegetative cover.
