

Infiltrator EZsnap Riser

Grommet Installation Instructions

Riser-Grommet Installation

Note: It is recommended to perform this installation prior to connecting the riser to a tank or to additional riser(s).

Note: Maximum hole size should not exceed 2-7/8".

1. Measure and mark the location of the grommet.
 - a. For the 12" riser maintain a minimum distance of 3" from the ribs at the wide opening and 2" from the narrow opening of the riser (See Detail 1).
 - b. For the 6" riser measure and mark a pilot hole measured at 1.5" from the wide opening of the riser (See Detail 2).
2. Drill hole through riser.
 - a. Use the appropriate hole saw for pipe diameter. Start with the drill in the reverse and drill until a groove has formed in the riser. Then set the drill to forward and drill opening at the pre-marked location.
 - b. Remove debris from the hole and smooth surface with knife or grinder.
3. Set appropriately sized grommet into opening.
4. Attach riser to tank.
 - a. For IM-Tanks follow Infiltrators IM-Series Tank Riser Connection Guidance Document for EZsnap Risers.
5. Bevel the edge of the pipe and coat the beveled end with soapy water or a non-stick spray.
6. Set pipe into the grommet.
